DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Specie A: a set of learning algorithms as recited in claims 3, 4, 38, 39, 79, and 80.

Specie B: a set of training analysis as recited in claims 5-7, 40-43, and 81-84.

Specie C: a biological state class as recited in claims 10-16, 46-52, and 87-93.

Specie D: a candidate biomarker as recited in claims 17, 53, and 94.

Specie E: a component as recited in claims 19, 55, and 96.

Specie F: an expression profile assay as recited in claims 21-26, 57-62, and 98-103.

Specie G: a binding partner as recited in claims 29, 65, and 106.

Specie H: an assay to measure level of data elements as recited in claims 32-33, 67-68, and 108-109.

Species of group A, learning algorithms are divergent because profiles represented by the data sets are different and independent from each other. Data generated by one type of algorithm is expected to be different from data generated by any other type of algorithms.

Species of group B, a vector machine analysis, a linear discriminating analysis, and a unified maximum separation analysis algorithms are divergent because they are separate arts and data for each analysis are independent from each other.

Application/Control Number: 10/635,241

Art Unit: 1631

Species of group C, biological states are patentably distinct because they are structurally unrelated, each has a distinct structure and function, therefore data for each state are independent.

Species of group D, biomarkers such as a diagnostic, a risk of developing, a risk of recurrence, and stage of disease are divergent because they are structurally and functionally different, and data generated from one type of profile is different from data generated by any other type of profile.

Species of group E, nucleic acids, proteins, polypeptides, peptides, carbohydrates are unrelated because they have different chemical structure and function, therefore data for each component are independent.

Species of group F, expression profile assays are patentably distinct because they are structurally unrelated, and each has a distinct chemical composition and function, therefore data for each profile are independent.

Species of group G, binding partners are separate arts, they are structurally and functionally distinct and data for each combination are independent from each other.

Species of group H, SELDI and immunoassay are divergent because they are separate arts and data for each analysis are independent from each other.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, 1, 2, 8, 9, 18, 20, 27-28, 30-31, 34-37, 44, 45, 54, 56, 63-64, 66, 69-78, 85-86, 95, 97, 104-105, 107, 110-111 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marina Lebedeva whose telephone number is (571)272-6101. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward can be reached on (571)272-0722. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
